Improving our machines through the technology of **beas Manufacturing** and **SAP® Business One**

ISOG Technology is an original equipment manufacturer in Germany with subsidiaries in China, Italy and Turkey. With over 85 employees, the company is improving their production processes thanks to SAP B1 and beas Manufacturing from Boyum IT. Both software's unite all departments databases, which enables to have a brighter look and control over the production process.

Before: Challenges and Opportunities

- IT was growing but the organization was decentralized
- Production department had to book manually many of the orders

Why SAP and beas Manufacturing

- Brings together all departments procedures into one system
- Permits all departments to get quick information about the others
- Common data base that is modularly like the product
- New organisational procedures: the delay between bookings and extractions is reduced

After: Value-Driven Results

- Transparency and planning security through integrated processes
- Growing internationally

“SAP Business One and beas Manufacturing enables me to have a higher transparency and planning security”.
