Minikomp Bogner GmbH, founded in 1996 by Peter Bogner, represents industrial expertise in special mechanical engineering. With its 75 employees, the company specializes in solutions for automation, electronics and control. The tailor-made systems and special machines are used throughout Europe, America and Asia and are highly valued in industries such as automotive, packaging technology, energy, aerospace, plastics and electronics.

## Before: Challenges and opportunities

- Needed an ERP system that increases visibility and accuracy of data
- Limited view of the current production status. When do assemblies become ready and when are they planned for?

## Why Boyum IT and partner:

- We chose Boyum IT's Beas Manufacturing solution to cover the entire production planning process.
- Additional add-ons from Boyum IT allow us to customize the system to our specific needs and manage important tasks directly from Outlook.
- We chose neumeier AG because of the direct proximity, the expertise of their consulting services and the hosting options.

## What significant benefits have you had since the implementation:

- More visibility of projects and running costs.
- Faster reaction time by providing accurate information on how materials are needed.
- Fully integrated financial accounting.
- Connection to CAD program.
- We always keep an eye on production status, resources, material and capacities.
- The new WebTerminal 2.1. thanks to its great usability has increased and accelerated the acceptance in assembly and production.

*"Thanks to SAP Business One and Beas Manufacturing, we have been able to improve our overall business processes and keep a close eye on our production."*

Markus Bogner, technical Management, Minikomp Bogner GmbH
