Community Foods Ltd **reduces its warehouse costs by 30%** with Produmex WMS

Community Foods Ltd is a specialist in the procurement, sale, and distribution of natural and organic dried fruits, nuts, seeds, beans, pulses, and cereals for the retail & manufacturing sectors. Community Foods markets and sells its product directly to the consumer and packaged for retail or wholesale. A leading EU importer supported by a vastly experienced Technical department.

Customer Challenges

- Using another WMS system was not fully integrated with SAP Business One, and much time was spent reconciling and troubleshooting between the systems.
- The inclusion of an end-to-end production process and real-time integration was needed.

Solution

- Stock decision making is better informed by knowing the status of the stock.
- The integration of warehouse transactions to the SAP database removed any mismatches between the stock, except for Expiry Date on batches.
- The QA team can control stock status by utilizing the Produmex statuses.

Results

- Produmex WMS enabled us to use less warehouse staff and to maintain visibility of stock across the whole business.
- Warehouse staff is using new equipment and using SSCC labels to track stock.
- The supply chain team is enabled to send ASN (via EDI) to our key customers.
- Stock expiry date management was improved, giving better customer service.

"THE PRODUCTION TEAM IS ABLE TO PROCESS WORKS ORDERS DIRECTLY ON PRODUMEX, CUTTING OUT THE NEED TO TRANSFER PAPERWORK BETWEEN DEPARTMENTS."

John Nichols – IT Manager
