## SAP Solutions

SAP Business One®,  
Beas Manufacturing

Euroquip is a Mexican company with 25 years of experience in the sale and distribution of industrial kitchen equipment. They deliver the products anywhere in the country, as well as offer technical service with trained and certified personnel by each of their suppliers.

### Before: Challenges and Opportunities

- Used 2 software programs to run the business, but without having the big overview they wasted a lot of time.
- Problems with stalled equipment shipments throughout the country with consequences for both them and clients.

### Why SAP and Beas Manufacturing

- Needed a system to give them the complete overview of the entire business.
- SAP Business One allows us to position us better.
- Red Sinergia is an experienced partner and offers us the best support.

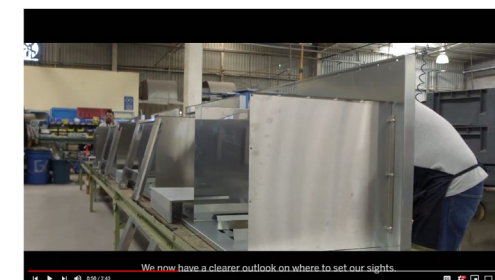

### After: Value-Driven Results

- Beas Manufacturing for the entire production planning, purchase planning and inventory monitoring.
- Improved cost control, product pricing and display production and operation cost in real-time.
- Improved response time and enhanced customer service.
- Better positioning and clear overview of what equipment is profitable and what is not.

*“We use Beas Manufacturing constantly for production- and purchase planning and inventory monitoring and it has helped us a lot”.*

Ana Karen Botelo, Operations Engineer, Euroquip S.A.
