Beas Manufacturing

PARTNER

Heinsohn Technology

Industrias AVM is an innovative Spanish manufacturer in the Metal Processing industry that carries out engineering, manufacturing, repair, maintenance, technical consulting and assembly of machinery and equipment for the petrochemical, agricultural-mining and food sectors. They have more than 24 years of experience and presence in the Latin American market.

Customer Challenges

The company kept its information through independent systems and, although the structure of the work orders was maintained, the information for cost and reliability control of inventories was not integrated before. Levels of doubled registrations by users were high.

Solution

With Beas Manufacturing it was possible to establish the processes and controls from the implementation. All the information was integrated, from sales order to the closing of the OT and its invoicing, with the integration of Beas with SAP Business One – the needed system to control the operation of the company.

Results

Recognizing costs per item with standardization processes, achieving reliability in inventories, avoiding reprocessing by users, having real-time information for decision-making at the operations level represented savings for the business.

"THE MOST REPRESENTATIVE IMPACT WAS THE CONTROL ON COSTS BY STANDARDIZING MAIN MATERIALS AND SETTING CRITERIA FOR THE ALLOCATION OF THESE COSTS BY ARTICLE."

Luz Stella Albarracin Gonzalez, Quality Coordinator, Industrias AVM
