Trecolan achieves **adaptability and customer loyalty** with **SAP Business One and Beas Manufacturing**

Trecolan is a mid-size manufacturer of plastics and fibers for the automotive and household appliance industries. To replace its limited green-screen ERP application, the company chose SAP Business One with Beas Manufacturing as a future-oriented solution to manage all of its commercial and manufacturing requirements.

Before: Challenges and Opportunities

- Previous ERP offered no flexibility for operational procedures
- Needed a more open and robust system to keep growing and moving forward
- Limited reporting, analysis and representation of data in the old system

Why SAP Business One and Beas Manufacturing

- The combination of SAP Business One and Beas Manufacturing provide a future-oriented solution
- Optimizes all commercial as well as production-related processes and is readily adaptable to existing workflows
- APLIKO handled the implementation in a target-oriented, practical and positive manner

After: Value-Driven Results

- Scrap quantities are automatically recorded, making it easy to identify where any problems reduce scrap in the process
- Comprehensive reporting and dashboard functionality for more better decision-making
- Huge reduction in workload through process efficiency
- Supports quality management by automatically allocating supplier documentation to the corresponding goods receipt, with supplier inspection results available at the click of a button

“With Beas Manufacturing and SAP Business One I now have a wide range of possibilities in terms of reporting, dashboards as well as process management and optimization.”

Lars Engert, Chief Information Officer, Trecolan GmbH
