

SILMAG controls production and supports demand with Beas Manufacturing

SILMAG is a manufacturing company producing biomedical products of single use in Argentina and needed a complete system to control production in every semi-elaborated product. Beas Manufacturing was the right software solution for MRP2 as it can help them support their clients' demand.

Challenges

- All records were processed manually on spreadsheets, it was how the production team was doing it for a long time

Solution

- Adjust and customize some points to adapt them to their manufacturing specifically

Results

- They are not yet exploring the full potential that Beas has, it was implemented less than 1 year ago
- The fundamental improvements were digitization and the provision of a lot of information online that they did not have before
- What they appreciate the most is the formulations the MRP2 and ASP run - these are fundamental processes in production

"WHAT WE APPRECIATE THE MOST IS THE FORMULATIONS THE MRP2 AND ASP RUN. THESE ARE CRUCIAL PROCESSES IN PRODUCTION."

Gustavo Siso, Global CIO, SILMAG
