Beas Manufacturing

FEATURED PARTNER

Interlatin S de RL de CV

“YINSA” offers, since 1982, solutions for the agriculture and construction industries with their manufactured products, in Mexico but also other countries they export to. Beas Manufacturing helped them with their logistics, production planning and cost calculation, and allows them to associate their wide experience with technology for more efficiency and for quicker, well-informed decisions.

Customer Challenges

- They needed more accessible information.
- Lack of predictability when planning due to lack of connection between the information they accessed and SAP Business One.
- It was only possible to obtain the actual costs of production at the end of each month.
- Their production and warehouse were not connected, which meant delays.

Solution

- Get information in real time.
- Obtain greater control over the consumptions necessary for production in order to reduce storage and production costs.
- Connect departments and information to SAP Business One, accessible to everyone.

Results

- Assertive production with terminal support and better control over the materials needed and available.
- Decision making based on accurate information in real-time.
- 10% more production efficiency through production planning automation.
- 50% less materials stored with a clearer vision and prediction of what is needed.

“WHEN WE SEE A SALES ORDER, WE CAN INSTANTLY SCHEDULE PRODUCTION AND BE MORE EFFICIENT.”

Pedro Valenzuela / Production Planning Manager
