# Trecolan achieves adaptability and customer loyalty with **SAP Business One**®

Trecolan is a mid-size manufacturer of plastics and fibres for the automotive and household appliance industries. To replace its ageing, limited green-screen ERP application, the company chose SAP Business One with beas Manufacturing module from Boyum IT as a future-oriented solution to manage all of its commercial and manufacturing requirements. The flexible solution was readily adapted to Trecolan's business processes, and offers an array of reporting and dashboard functionality in addition to process management and optimisation.

## Before: Challenges and Opportunities

- Previous ERP offered no flexibility for operational procedures
- Needed a more open and robust system to keep growing and moving forward
- Limited reporting, analysis and representation of data

## Why SAP and Partner

- SAP B1 and beas Manufacturing provide a future-oriented solution
- Optimizes all commercial as well as production-related processes and is readily adaptable to existing workflows
- Boyum.it handled the implementation in a target-oriented, practical and positive manner
- Some specific requirements were simple in nature yet hard to solve, but collaboration made it possible

## After: Value-Driven Results

- Huge reduction in workload through process efficiency
- Supports quality management by automatically allocating supplier documentation to the corresponding goods receipt, with supplier inspection results available at the click of a button
- Scrap quantities are automatically recorded, making it easy to identify where any problems lie and reduce scrap in the process
- Comprehensive reporting and dashboard functionality for more informed decision-making

**“For me, SAP Business One means adaptability and customer loyalty.”**
