Beas Manufacturing & SAP Business One

ACATEC manufactures parts for the Aerospace Industry. Among its clients are organizations such as AIRBUS, Alestis Aerospace, Aciturri and CESA, among others. The company needed to find a new system because for their previous one to expand it would require a big effort. Therefore, they chose Beas Manufacturing and SAP Business One for management and automation.

Before – Challenges and Opportunities:

- The previous ERP did not allow new implementations.
- The updated system provides value in the current industry scenario, such as updates, new features and scalability, among others.
- A software for permanent updating and new processes was necessary.

Functionality covered with Boyum add-ons and not through standard SAP Business One:

- SAP Business One together with Beas Manufacturing fits perfectly to meet the needs and expectations of the company, especially in logistics, inventory, traceability and production.
- Advantic offered confidence from the beginning and maintained this dynamic during and after implementation.

After – Benefits:

- Greater control of the production, traceability and integration of information in a single source.
- Elimination of errors in the data thanks to the greater control of the information.
- Real-time information for estimates and decision-making.
- Error detection and registration.
- Quick response to incidents and correction of possible user errors.

“For our growth it is essential to have a technological partner that allows us to scale, grow and expand markets. With Beas Manufacturing and SAP Business One we have achieved this goal, essential for our expansion.”

Santos Esteban Lázaro, IT Manager, ACATEC
