

Boyum IT Solutions acquires FORNAV and strengthens its position in the Microsoft Dynamics 365 Business Central ecosystem

Boyum IT Solutions, a global software company helping small and medium sized businesses bring their products to life, has agreed to acquire FORNAV, a leading provider of document management and reporting solutions for Microsoft Dynamics 365 Business Central.

With this acquisition, Boyum IT further expands its presence in the Business Central ecosystem by adding a mission critical capability that sits at the core of everyday business operations. FORNAV specializes in helping partners and customers simplify and optimize the design, management and distribution of business documents such as orders, invoices, shipping documents and labels, without the need for complex coding.

The addition of FORNAV complements Boyum's existing portfolio by strengthening how structured data is transformed into accurate, compliant, and business ready outputs. Looking ahead, the combination of FORNAV and Boyum IT also creates a strong foundation for the responsible use of AI within document-centric ERP workflows. By applying AI to structured Business Central data, the combined offering will be able to help partners and customers further reduce manual effort, identify exceptions and improve consistency across high-volume, mission-critical documents, while ensuring transparency and control.

FORNAV is a natural fit for how we are building our Business Central portfolio. It solves a real, everyday need for partners and customers, and it does it in a way that is deeply embedded in how businesses operate. This is exactly the kind of solution that creates long-term value across our partner ecosystem. By bringing FORNAV into Boyum, we are strengthening our ability to help partners deliver more complete, connected solutions that customers rely on every day.

Jesper Andersen, CEO of Boyum IT

FORNAV has built a strong reputation within the Business Central ecosystem, supported by a global network of approximately 370 partners and more than 2,300 customers across over 30 countries. The solution is deeply embedded within ERP workflows, where accuracy, auditability and regulatory compliance are essential, making it a trusted component in many implementations.

The founders of FORNAV will remain actively involved in the business following the acquisition and will take on key roles within Boyum IT to support continued growth, product development and partner engagement.

From the beginning, our focus has been to make document generation simple, powerful and deeply integrated within Business Central. Joining Boyum IT gives us the opportunity to scale that vision further, supported by a strong partner driven organization and a shared commitment to delivering practical value to customers. We are excited about what we can achieve together.

Jan Sillemann, co-founder of FORNAV

The acquisition creates immediate opportunities to strengthen partner engagement, expand reach within the Business Central ecosystem and unlock cross portfolio value across Boyum's solutions. By combining FORNAV's strong partner relationships and installed base with Boyum's global partner infrastructure, the company aims to accelerate growth and deliver more consistent value across its ecosystem.

Boyum IT continues to build on its growth strategy, combining organic development with targeted acquisitions that strengthen its portfolio and deepen its role as a trusted partner in both the SAP Business One and Microsoft Dynamics 365 Business Central ecosystems.

About Boyum IT Solutions

Boyum IT Solutions is a global software company that helps small and medium sized businesses bring their products to life. The company supports every stage of the product journey, from initial concept through to the final customer experience. Its focus spans the entire product value chain, extending beyond the traditional supply chain to help businesses create value, drive innovation, and deliver products with efficiency and confidence. Its solutions connect people, data, and processes across design, planning, production, quality, delivery, and go to market activities.

Boyum IT Solutions operates as a trusted partner rather than a traditional software vendor. With deep domain expertise, a strong collaborative culture, and a consistent focus on innovation, the company supports partners and customers in addressing real industry challenges. It plays a strategic role in both the SAP Business One and Microsoft Dynamics 365 Business Central ecosystems, enabling partners and customers to achieve stronger outcomes and shared growth.

For more than 28+ years, Boyum IT Solutions has maintained a 100% partner driven model. Today, it supports more than 15,000 customers through a network of over 1,100 partners across more than 130 countries.

The company's purpose, Bring Your Products to Life, reflects its commitment to delivering human centered innovation and technology that works for people. Through this approach, businesses are empowered to create products that make a meaningful impact.

About FORNAV

FORNAV is a software company headquartered in Fredensborg, north of Copenhagen, Denmark, providing solutions that simplify working with documents in Microsoft Dynamics 365 Business Central. FORNAV gives partners and customers an efficient and cost-effective way to design, customize, manage and distribute Business Central documents including orders, invoices, labels, and e-invoicing.

FORNAV is recognized for its deep integration with Business Central and its ability to streamline document processes, enabling partners and customers to work faster and more efficiently without complex coding.
